

Q-10.13.3.10

Yash Patil - EE22BTECH11058

Question: Eight coins are tossed together. The probability of getting exactly 3 heads is

- 1) $\frac{1}{256}$
- 2) $\frac{7}{32}$
- 3) $\frac{5}{32}$
- 4) $\frac{3}{32}$

Solution: Defining variables:

Parameter	Value	Description
n	8	Number of coins tossed
p	0.5	probability of getting heads
$\mu = np$	4	mean of the distribution
$\sigma^2 = np(1 - p)$	2	variance of the distribution
Y	0-8	denotes number of heads obtained

Fig. 1. Binomial vs Gaussian

Gaussian Distribution:

The gaussian distribution for Y is

$$P_Y(x) = \frac{1}{\sqrt{2\pi\sigma^2}} e^{-\frac{(x-\mu)^2}{2\sigma^2}} \quad (1)$$

For getting 3 exactly heads

$$Y = 3 \quad (2)$$

Substituting in equation (1), probability for getting exactly 3 heads is

$$Y = 3 \quad (3)$$

$$P_Y(3) = \frac{1}{\sqrt{2\pi \times 2}} e^{-\frac{(3-4)^2}{2 \times 2}} \quad (4)$$

$$= 0.35206 \quad (5)$$

And, by binomial distribution, the probability of getting exactly 3 heads is

$$= \binom{8}{3} \times 0.5^3 \times 0.5^5 \quad (6)$$

$$= 0.21875 \quad (7)$$

\therefore option 2 is correct.

Comparing Binomial and Gaussian distribution:
